

Individual Desktop Scan

This method is best for individual machines that require a scan using AIT. Please consider that if you are going to use this method to scan several machines, it is best to review the [zip method](#) or [shared folder method](#) as they would account for duplicate naming conventions of the exported data.

1. [Download](#) and [Install](#) AIT on your machine.
2. Run AITViewer.exe
3. Navigate to the "SCAN" tab and enter "localhost" under the DISCOVERY METHOD of "Specific Device"

The screenshot shows the AITViewer application interface. At the top, there are three tabs: 'VIEW', 'SCAN' (which is highlighted with a yellow box), and 'SCHEDULER'. Below the tabs, there are three buttons: 'Start' (with a play icon), 'Cancel' (with a square icon), and 'Schedule' (with a calendar icon). The main area is divided into three panels: 'DISCOVERY METHOD', 'AUTHENTICATION', and 'SCAN OPTIONS'. In the 'DISCOVERY METHOD' panel, there are four radio buttons: 'Active Directory', 'IP Range', 'Device List', and 'Specific Device' (which is selected and highlighted with a yellow box). The 'Specific Device' option has a text input field containing 'localhost'. The 'AUTHENTICATION' panel has two radio buttons: 'Windows Integrated' (selected) and 'Credentials'. The 'Credentials' option has fields for 'User Name' and 'Password'. The 'SCAN OPTIONS' panel has three checkboxes: 'Force Rescan', 'Discover Computers Only (Do Not Scan)', and 'Not Scan'.

4. Select "Start" and wait until you see the statement "Scan Complete" in the Scan Log area
